**Subject: Reference for Mr. Benedikt Steiner of XPLORE GLOBAL Ltd.**

Dear Sir/ Madam,

IntraMinerals Ltd., and its subsidiary Minas do Lurio Lda. (MDL), is a junior exploration company with interests in alluvial and hard rock gold mining in the Pemba Province, Mozambique. We have been operating in the area for nearly five years and are currently involved with the delineation and testing of gold-bearing structures.

In July 2018, Benedikt was recommended to me by one of his former students at Camborne School of Mines (UK) where he runs two applied MSc programmes in Mining and Exploration Geology. I have taken Benedikt on board as independent consultant to the company given his credentials in exploration geology, particularly in gold and base metal exploration techniques.

Benedikt has to date been involved with a series of data reviews for MDL and a site visit in September 2022. He has also produced three reports in 2018, 2019 and 2021, concisely summarising and evaluating the potential for gold mineralisation in our license areas that have been undergoing trenching, soil sampling and will, in future, be drill tested. His reports have helped to get investors on board and I have regularly used his reports to showcase the potential of our license areas to prospective investors, for example during the Mines and Money conference in London.

I am very happy with his contributions and the value he generated. Therefore, I would like to recommend him as a mineral exploration consultant.

Sincerely,

Managing Director  
Minas do Lurio Lda.
