DRILLING METHODS IN MINERAL EXPLORATION

Contact: info@xplore.global
Website: www.xplore.global

The 2-day short course Drilling Methods in Mineral Exploration has successfully been taught to over 250 participants across 5 European countries since its inception in 2012.

The course is designed to provide both geology and mining engineering professionals and graduates an in-depth understanding of the drilling methods used in mineral exploration and mining. Participants learn not only about the different drilling and analytical methods, but also essentials such as drilling logistics, HSE and drill-site setup. The course therefore prepares the participant to identify, deal with and solve arising technical and logistical problems in a safe, economic and sustainable manner.

Recommended audience

■ Exploration and Mining Geologists ■ Geoscience Graduates ■ Project Managers

About the presenter

Benedikt Steiner currently is the Director of xpLORE Global Ltd. and holds the position of Lecturer in Exploration & Mining Geology at the Camborne School of Mines, University of Exeter, UK.

Benedikt has extensive experience in the mineral exploration industry. He previously worked for several years on Rio Tinto Exploration's projects in Namibia and Zambia. He is particularly interested in geochemical exploration, exploration targeting of a variety of ore deposit styles, and the provision of training courses to the mining industry.

Benedikt is a graduate from the University of Tübingen, Germany, (BSc) and the Royal School of Mines, Imperial College London, UK (MSci).
